VINPILOT® MANAGER SOFTWARE

The VinPilot®manager software provides all useful tools both for temperature control and wine making management. Cutting edge technology is integrated in a clearly structured graphic design offering maximum user-friendliness. It just takes a few steps to set up your cellar with the VinPilot®manager.

All symbols are close to reality and provide a good overview of the winery. Independently from the number of installed fermentation control units, any amount of tanks and cellars can be created. Keep track of all your wines on stock easily till bottling! All functions can be followed either on a PC in the wine maker's office or directly in the cellar on a touch-screen.

The latest network-compatible version allows several users working contemporarily with different authorization levels (set up by the master user).
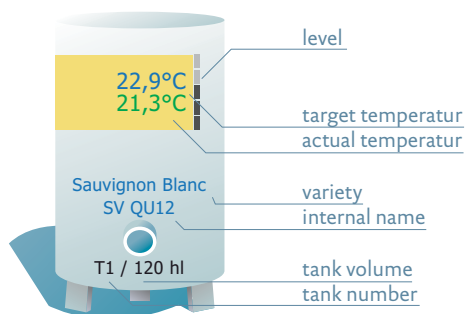

CONTROL
- Regulation according to a set temperature
- Temperature control following a preset temperature-curve
- Conduction of fermentation depending on sugar consumption
- Cyclic control (e.g. programmed pump-overs)
- Integration of micro-macro oxygenation
- Control of air conditioning in your cellar (temperature and humidity)

MANAGEMENT
- Record of your grape-suppliers
- Blend management
- Record of all movements (e.g. racking)
- Documentation of all treatments with batch management
- Record of all analysis of any specific batch
- Wine batch management for complete traceability
- Print-function for all relevant data
- Exportable batch lists

CELLAR VIEW

In one glance you will get a panoramic overview of all tanks through the cellar-layout. The basic information of every batch is visible immediately as it is displayed in the symbol of each tank. A click on any "tank" will open its batch-window with all feeds. There you also start running the fermentation control.

VINPILOT® CONTROL FUNCTIONS

Cutting-edge technology of the fermentation control units by VinPilot®, combined with its manager software, provide a wide range of control options: In addition to several alternatives of conducting the fermentation, VinPilot®Pro assists you with managing your red wine maceration methods, cellar climate, micro-macro oxygenation as well as your cooler unit. The system is open to new features in the future.

EASY AND COMPLETE DOCUMENTATION

Additionally to fermentation and sugar graphs, all movements, analysis and treatments are documented and shown by a mouse click. Moreover, blending and racking of batches into several tanks are done with a few easy steps and remain recorded automatically. The well-structured process and batch management provides access to any stored data and graphs at any time. In the overviews of the batches you can recall all wines and all their processes. Search boxes support the user to retrieve wines even after years.

Compile clear and complete batch reports including their fermentation graphs easily by using the integrated printing module. Furthermore, you can easily export data from single batch records to entire overviews of your cellar.
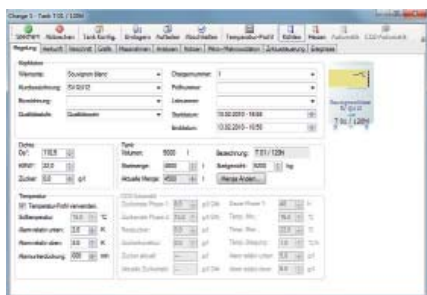

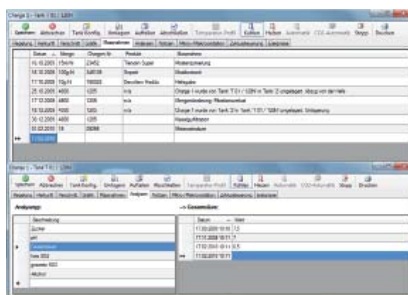

LATEST ADD-ONS

Our most recent update includes the integration of full network-compatibility, management and traceability of all treatment products as well as administration of grape-supply, just to name a few.
Direct communication with our clients has helped us to make the VinPilot®manager software both user-friendly and made-to-measure for wineries. This process will be continued in the future. We work constantly in order to provide new features with intelligent applications, so that you will be able to organize your work even more efficiently.
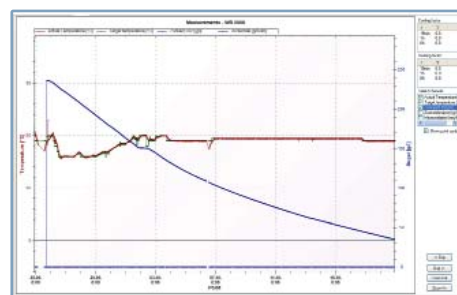

VINPILOT® manager

Modern batch-management for complete records and easy traceability.

Complete documentation of all treatments, movements, blends and analyses

Pre-plotted and recorded fermentation curves for perfect temperature control and documentation

VINPILOT® SOFTWARE

PROZESSDOKUMENTATION MIT VINPILOT®manager

At the beginning perfect control during fermentation was the main objective in our software-development. These days, an entire cellar management program is available for the oenologist using the VinPilot®Profi-Manager. In addition to storing the fermentation and sugar curves, all relocations, blends and other treatments can be documented via a mouse click.

Using VinPilot®Manager you can manage the entire traceability of production steps and with the documentation according to legal requirements in an easy and fast way.

As you are overworked during the season, you will not only appreciate the extensive functions, but also the extremely easy handling. VinPilot®Manager is continuously extended and improved in collaboration with our customers.

Due to this ongoing exchange of ideas and the fast implementation in our software we provide our customers with the necessary advance which is needed by successful businesses.

VINPILOT®manager

- Fermentaion control
- Cellar management
- Process traceability
- Network compatibility

YOUR BENEFIT

- Perfect temperature control and record
- Documentation of all of your processing steps
- Make any entry via PC or directly in the cellar
- Steadily expanding software which is oriented on the needs of time
